Wai 3 Tap Hole Bath Filler

WAI3BFBK, WAI3BFBB, WAI3BFBN & WAI3BFGM Installation Guide

Technical Specification

Working Pressure:

Min: 0.3 Bar

Max: 5.0 Bar

Operating Temperature:

Hot: 65°C

Cold: 5°C

Inlet Connections:

3/4" BSP

Features:

- On trend finish for a designer look
- Contemporary square design
- Ceramic disc handles ensure a smooth operation
- Products which are easy to use by all the family

- Chrome
- Matte Black
- PVD Brushed Brass
- PVD Gunmetal
- PVD Brushed Nickel

Troubleshooting

| Symptom | Cause(s) | Resolution |
|-------------------------------|---|---|
| No flow or low flow rate | Partially closed isolation valve | Open isolation valve |
| | Instantaneous water heater cycles on and off as flow rate or pressure is too low | Increase water flow rate or pressure through system. |
| | Air lock or partial blockage in the supply pipework or hoses | Flush through pipework to ensure removal of debris and any airlocks. |
| | Hot or cold water being drawn off elsewhere causing pressure changes or instantaneous boiler temperature changes. | Try not to use other water outlets when using the mixer |
| Water dripping from the mixer | This is normal for a short time after using the mixer | This is due to residual water tension, the build up of water in the tap body. |
| | If water continues to drip, possible issue with the flow control cartridge. | Please contact our customer care team. |
| Mixer does not turn on | Closed isolation valve | Open isolation valve |
| | Mains water supply turned off | Turn on mains water supply |

Installation Requirements

Before commencing installation of the new product, ensure that the system has been flushed to remove any debris, which could cause damage to the valves and invalidate the warranty.

Installation

Drill three holes on the bath as per the drawing if required.

Install the Spout

1. Remove the tee connector (24), nut (27), Fixing Kit (11,12 & 13) from spout tail.
2. Then place the spout inlet connector (21) through the middle bath hole with the base plate (19) under spout.
3. Slide the Fixing Kit (11,12 & 13) over the inlet connector (21) and tighten with screw driver.

Install hot/cold control valve

Hot to be installed on the Left of the Spout Cold to be installed to the Right of the Spout.

4. Fitting the Hot Control Valve first on the left of the spout.
5. Remove Handle, Stem and Base Plate (1,2, 3, 7 & 8) from Valve Body (14).
6. Place the Valve Body (14) through the 1st hole in the bath from the underneath.
7. Replace the Handle (1,2 & 3) back on the Valve Body (14) - Tighten the handle with allen key.
8. Slide the Fixing kit over its tail and tighten with screw driver.
Hole 1 should now be installed as per image

9. Follow the same way to fit the cold control valve.
10. Connect the tee connector and the hot/cold control valves using braided hoses.
11. Adjust all parts in their position and then tighten all connections.
12. Connect water supplies and the hot/cold control valve. Check for any leaks.

Please keep these instructions for future reference and request of replacement parts

General Safety Information

Please read all of the instructions before installation.

Methven recommends this product is installed by a competent person in compliance with all relevant regional regulations.

Remove all packaging and check the components for damage before starting installation.

This product **must** not be modified in any way as this will invalidate the guarantee.

It is the responsibility of the installer to ensure a waterproof seal is achieved, after installation all connections must be checked for leaks.

All outlets used primarily for personal hygiene shall deliver water at a safe temperature as per regional regulations.
